

“It’s the young computer scientists and entrepreneurs who will decide how Germany tackles the challenges of a digital future.”

Dear readers,

Camera robots for special effects impossible to create by hand, or open Wi-Fi for everyone – those are just two of the projects that we are successfully working on in Adlershof. Analysing, storing, and making large amounts of data available for new applications are key issues of the digital information age! According to the Digital Strategy 2025 report by the Federal Ministry for Economic Affairs and Energy, Germany’s IT industry has joined the race for the global top ranks. This is just one reason why more and more renowned companies have relocated to the Centre for IT and Media in Adlershof.

By providing them with a dedicated centre and continuous, professional support, Adlershof gives special attention to start-ups. After all, the contributions of young computer scientists and entrepreneurs will decide how Germany will master the digital challenges of the future.

Yours,

Dipl.-Ing. Susann Niemeyer

Head of the Centre for IT and Media

**13,400 sqm**
Space for hardware and
software development**110**
Companies**1,320**
Employees

Key Areas
